# GLOBE Campaigns Go Indoors

GLOBE Campaigns have suspended outdoor fieldwork, but campaign science continued indoors during April 2020:

**GLOBE Mission Mosquito** conducted an **interactive videoconference on April 2** to *Meet up and Do Science*. The **86 participants from 10 countries** included teachers, students, informal educators, and citizen scientists who worked together on a live online activity to analyze a satellite image and habitats reported using GLOBE Observer Mosquito Habitat Mapper data.

**Trees Around the GLOBE** student research campaign held an **April 14 webinar with 67 participants from 16 countries, including 12 students: *GLOBE Student Tree Research Extravaganza***. Presenters included students and educators from Malta, Croatia, and the United States who shared their tree research, tree culture, and personal tree stories. The students' research projects showcased data, methods, results, and applications.

GLOBE  
Observer

The image is a video thumbnail for a GLOBE Observer event. It features a dark blue background with white and light blue text. The main title 'Meet up and do Science' is in a large, light blue font. Below it, the date and time 'April 2, 2020 2pm ET/ 11am PT' are displayed in white. A URL 'http://bit.ly/GMM-EarthDay' is provided in light blue. The central part of the thumbnail shows a screenshot of the GLOBE Observer Mosquito Habitat Mapper (MHM) interface, which displays a satellite image of a residential area with red and green markers indicating impervious surfaces and tree canopy. A legend on the left side of the screenshot shows '96% Impervious Surface' with a red dot and '3% Tree Canopy' with a green dot. A scale bar at the bottom of the screenshot indicates '100m'. The GLOBE Observer logo is in the bottom right corner.
